Why TaskbarStats?

Always in view
A tiny widget next to the notification area: CPU, GPU, memory, network, disk, battery, temperature, ping and FPS.

Matches Task Manager
Same sources as Task Manager, so you can trust the numbers. Frugal: about 2% of one core.

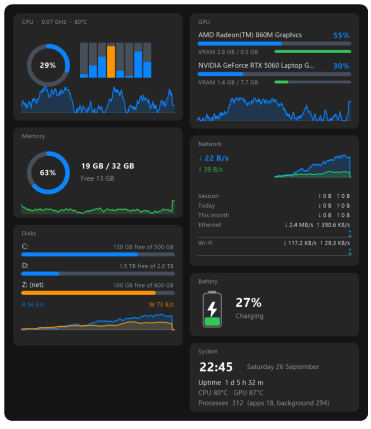

Dashboard and cockpit
A large desktop dashboard and a fullscreen cockpit with graphs, sensors and all specifications.

Made for gamers
A free FPS counter with 1% low, mini overlay and click-through (Ctrl+Alt+W) so your clicks reach the game.

16 themes, plus your own
Neon, Matrix, Game Boy, Dracula... or build your own with the JSON editor. Share it as a single file.

Extend with plugins
Claude usage, weather, location, uptime monitor or your own script/REST values. Safe: no admin rights.

What it looks like

Desktop dashboard

Fullscreen cockpit

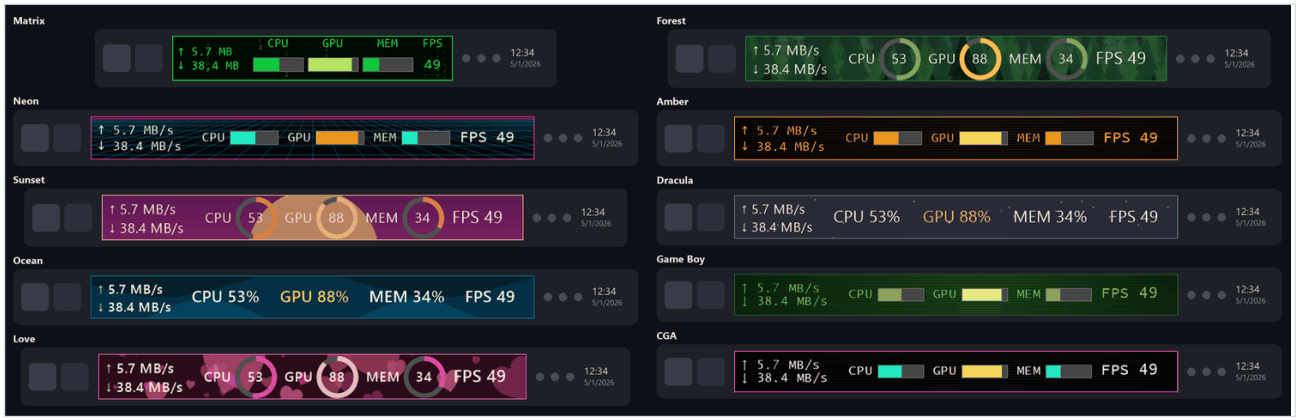

Install in 3 steps

1. **Download** `TaskbarStats-Setup-<version>.exe` from the GitHub releases (or via taskbarstats.com).
2. **Run** the installer, confirm the Windows prompt and choose whether it should start with Windows.
3. **Done**: the widget appears next to the clock. Right-click → *Settings* to make it yours.

Windows 10/11 (64-bit). No .NET install, no account, no internet needed. Silent install: `/VERYSILENT /AUTOSTART=yes`.

Options

Show	Look	Where
CPU, GPU, memory, network, disks, battery	Numbers, gauges, bars or graphs	Taskbar widget
Temperatures, clock speed, disk active	16 themes + your own	Desktop dashboard (click-through)
Ping, processes (apps/background), FPS	Own colours, thresholds, font	Fullscreen cockpit with tour
Notifications, monthly network data limit	Background image, follow the Windows theme	Dutch, English, German or your own language

A selection of the 16 built-in themes, here with FPS in the widget.

Tips and tricks

- **Ctrl+Alt+F** opens the fullscreen cockpit; click a tile for details, **I** shows all specifications.
- **Ctrl+Alt+D** makes the dashboard click-through: living wallpaper behind your windows.
- Hover 2 s over the widget for the tooltip; **middle-click** copies all info to the clipboard.
- Test-drive themes with **Preview (10 s)**; share a theme by exporting its file.
- Lost the widget? Menu → **Stick to notification area**. New PC? Export/import a **Backup**.
- The **Script / REST** plugin shows any value on your widget (Home Assistant, NAS, exchange rate...).
